

Manual QA Report - Glowly AI

Test Date:

Tester Name:

App Version: 5.6

Platform: iOS and Android

Device Information: iPhone (iOS) / Xiaomi (Android)

1. Introduction

This report provides an overview of the manual testing conducted on the **Glowy AI** app. As part of the testing process, I explored the app's core features, including the onboarding experience, photo uploading, AI-based image generation, customization options, and overall user flow. The goal was to identify any usability issues, bugs, or performance concerns that might affect user experience, ensuring that the app runs smoothly and efficiently for everyone.

The testing covered both iOS and Android platforms to check for consistency across devices and operating systems. In this report, I will share detailed findings, including both positive aspects and areas for improvement, along with specific suggestions to enhance the app's functionality and user satisfaction. By thoroughly documenting any issues encountered, I aim to provide a clear path for future improvements and help ensure that **Glowy AI** delivers the best possible experience for its users.

2. Testing Scope

The testing covered the following areas:

- Setup
- App Store Updates
- Storage Capacity
- Battery
- Onboarding process (permissions)
- Login
- Buttons and Functionality
- Photo upload and AI generation functionality
- Screenshot
- Customization and editing features
- Camera
- General app navigation and user flows
- Payment
- Settings
- Cross-platform compatibility (iOS and Android)

3. Detailed Findings

3.1. iOS Setup

Tested Features:

- Open App Store
- Search Glowy AI
- Download
- Open App
- Application Image

Findings:

- **Positive:**
 - App Store was opened successfully. When searched for “Glowy AI” the aimed application was seen.
 - When clicked on the download button, the app downloads successfully without issue.
 - The image of the application successfully shows up at the Home Screen.
 - The application successfully shows up as “Glowy” on Home Screen.
- **Negative:**
 - There are many other applications named Glowy.
 - **Severity: Low**

3.2 App Store Updates

Tested Features: Version Updates that were made so far.

Findings:

- When clicked on the “What’s New”, it successfully shows the version updates that were made.
- **Severity:** High

3.3 Storage Capacity

Tested Features: How much storage Glowy uses

Findings:

- In the App Store Glowy's size appears to be 271.1 MB.
- In the iPhone Storage Glowy uses 269.5 MB.
- **Severity:** High

3.4 Battery

Tested Features:

- Does it work over 50%, and below 20% and 10%?

Findings:

- Yes, it successfully works over 50% and below 20% and 10 %.
- **Severity:** High

3.5 Onboarding Process (Permissions)

Tested Features:

- Does the app ask for permissions?

Findings:

- When the app is launched on iOS, the app asks for notification permission and tracking activity permission.
- **Severity:** High

3.6. Login

Tested Features: Login and account creation

Findings:

- The app does not require the user to create an account.
- The app does not require the user to login in order to use the generator.
- **Severity:** Low

3.7. Buttons and Functionality

Tested Features: The functionality of the buttons

3.7.1 Filters

Findings:

- The Filters button is on the left bottom.
- When at the Filters page, on the upper left side there is a “PRO” option to “Unlock Full Access” where the user can select weekly or yearly subscription.
- There is a plus button on the upper right side and when clicked on it, the app successfully asks if the user would like to take a photo or Chose from the Library.
- In the Filters section there are 11 subcategories with “Trending Filters, AI Video, Lux Collection, Business, Weekly Highlights, Too Hot to be Cold, Heat Up, Winter Collection, Hair Salon, Fitness, Outdoor Adventure” with the same order as shown.
- There is a countdown with hours, minutes and seconds showing “You are out of credits.
- In AI Video all the options require PRO subscription under the subcategory.
- **Severity:** High

3.7.2 Editor

Findings:

- The Editors button is on the second to left bottom.
- When at the Editors page, on the upper left side there is a “PRO” option to “Unlock Full Access” where the user can select weekly or yearly subscription.
- There is a plus button on the upper right side and when clicked on it, the app successfully asks if the user would like to take a photo or Chose from the Library.
- There are three buttons shown as “Erase Objects, Remove Background, Editor”.
- When the user clicks on Erase Objects “Select your source” appears with CAMERA or Photo Library or Cancel options appears.
- When the user clicks on Remove Background “Select your source” appears with CAMERA or Photo Library or Cancel options appears.
- When the user clicks on Photo Editor, Add Layer, Layers and Canvas appears.
 - When the user selects Add Layer; Photo, Aa Text and Shape options appear.
 - Permission is asked if the user allows permission to access the library.

- At Add Layer, In positive scenario the user selects photo from Choose Image according to the Recents at the Library. Both Your Photos and Stock Photos buttons are active.
- In negative scenario, the permission is not granted and “Permission Denied” appears on the screen. The functionality of Your Photos button disappears and the user can only select from Stock Photos button.

- In Aa Text Layer, Edit Text appears and there are several options to customize the text such as the font, color and orientation.
- In Shape; Square, Circle, Triangle, Octagon, Heart appears as options that the user can select.
 - After selecting a shape, “Edit Shape” appears with an option to rename the shape and Fill Style and Border buttons appear alongside with the positioning options for the chosen shape.
 - When Fill Style is selected many color options appear.
 - When Border is selected many color options appears alongside with the Thickness of the shape with a drag button selection.
- **Severity** When clicked on “Canvas” the options of choosing the size appears with the option to select according to the social media preference such as All, Facebook, Gumroad and Instagram .

- In the Filters section there are 9 subcategories with “Pride, Best Easter Stories, Stories, Product Stories, Templates for You, Product Photoshoot, Shopify, Amazon, Youtube” with the same order as shown.
- There is a countdown with hours, minutes and seconds showing “You are out of credits.
- In AI Video all the options require PRO subscription under the subcategory.
- **Severity:** High

3.7.3 Projects

Tested Features: Does it show the previously worked on projects?

Findings:

- The app successfully shows the past projects worked on.
- When clicked on a past project “Photo Editor” screen reopens to modify the project.
- **Severity:** High

3.7.4 Settings

Tested Features: About- Rate Us, Support, Change App Icon, Privacy Policy, Terms of Use and ‘Start 3-day free Trial’ appears.

Findings:

- ‘Start 3-Day Free Trial is shown if the user is not a PRO member and when clicked on it, it redirects the user to “Unlock Full Access” payment page.
- In the About grid Rate Us, Support, Change App Icon, Privacy Policy, Terms of Use and ‘Start 3-day free Trial’ appears in order successfully.
 - In the image shown the “Rate US” page appears and how to rate the app.

Good

Excellent

Help Us Grow 🙌

At Support button, automatically the image shown above appears. The app automatically fills out the To, From (using the main email address connected to the iPhone), Subject and the User section of the email.

- **Support Mail Sent Bug:** When an email is sent to Support, the sent email is not seen in the Sent folder of the iPhone Mail application.
 - **Positive:** In the email sent, it is seen that the App Version: 5.6 corresponds correctly to the app version at App Store.
- When Change Icon is selected, there are four different icons to select from.

When an icon is chosen, it is seen that the app icon automatically changes to the selected icon.

- Privacy Policy redirects to the Privacy Policy statement shown in glowyai.com.
- When clicked on Terms of Use, the app redirects the user to the legal document on glowyai.com.
- In the Setting, at the bottom of the About grid the correct version of the app is shown as it is at App Store.
- **Severity:** High

3.8 Payments

Tested Features: PRO Feature.

Findings:

- There are two different options for PRO membership; Weekly, and Yearly.
- The Weekly price is shown as \$9.99 and the price for Yearly is shown as \$39.99.
- When either one of these options are selected, the Next button at the bottoms get highlighted, it redirects to App Store permission by double clicking the right side button of the iPhone.
- Privacy Policy, Restore and Terms of Use are shown below at the bottom of the page.
- **Severity:** High

3.9 Screenshots

Tested Features: Does the app allow screenshots to be taken within the app?

Findings:

- The app allows the user to take screenshots.
- The screenshots taken are of the edited images and there are no restrictions.
- **Severity:** Medium

3.10 Android

Tested Features:

- App Compatibility and Functionality

Findings:

- The app provides two distinct options for PRO membership: Weekly and Yearly subscriptions.
- **Weekly Subscription** is priced at Turkish Lira 319.99, and the **Yearly Subscription** is priced at Turkish Lira 1099.99. Both options are displayed clearly on the subscription page, along with the benefits that come with each membership (e.g., full access to AI filters, premium customization options, etc.).
- The app successfully redirects the user to the **Google Play Store** for subscription purchases.

Additionally, the app functions properly on Android devices without any crashes or major performance issues. The user interface is responsive, and the features work smoothly across different Android versions and devices. The app's navigation is intuitive, and there are no significant delays or glitches when switching between features or screens. The app is also available and works successfully in Turkish.

Severity: High

- **Impact:** Subscription flow and payment functionality are crucial to the app's monetization. If users face issues with payment or access to premium features, it could lead to dissatisfaction and loss of revenue. Therefore, ensuring a smooth and error-free payment process is essential for maintaining a positive user experience.

4. Summary of Issues

1. **Flows at App Restart at Tutorial (Medium Severity)**
 - **Issue:** The AI-generated images at the beginning when the app is started are too fast and it does not allow the user to process and look at the images in detail.
 - **Impact:** Users may be dissatisfied with how fast the flow is.
2. **Slow Photo Processing (High Severity)**
 - **Issue:** The AI photo generation process was noticeably slow, often taking up to 65 seconds per image to complete. This delay makes the user impatient.
 - **Impact:** Slow processing times may frustrate users, especially those expecting quicker results, and could lead to decreased usage of the app.
3. **Onboarding Process (Medium Severity)**
 - **Issue:** During the onboarding process and whenever the app is restarted the “Rate Us” page reappears.
 - **Impact:** Users might get frustrated by seeing the Rate Us page every single time they launch the app.
4. **App Store Visibility (Low Severity)**
 - **Issue:** There are several other applications named "Glowy" in the App Store, which could confuse users searching for the app. This can affect the discoverability of the app and lead to search errors or incorrect app downloads.
 - **Impact:** Potential users may struggle to find the correct app, reducing the chances of new installations.

5. Suggested Improvements

1. **Improve AI Image Display Speed (Flows at App Restart)**
 - **Solution:** Slow down the AI-generated image flow at the beginning of the app startup, allowing users more time to process and view the images in detail. Consider adding an option to adjust the flow speed based on user preferences or providing a "pause" feature.
 - **Priority:** Medium. This will enhance the user experience and make the app feel more responsive, particularly for users who want to appreciate the images before proceeding to the next step.
2. **Optimize Photo Processing Speed (Slow Photo Processing)**
 - **Solution:** Optimize the AI algorithm to reduce the photo generation time. The goal should be to bring down the processing time from 65 seconds to no more than 20-30 seconds per image. This will require analyzing the backend processes to see if they can be streamlined or if additional computational resources are necessary.
 - **Priority:** High. A faster processing time is essential for a smoother user experience, preventing user frustration and increasing engagement.
3. **Fix the Reappearance of “Rate Us” Page (Onboarding Process)**
 - **Solution:** Ensure that the “Rate Us” page does not reappear every time the app is launched or restarted. Only show the "Rate Us" prompt once, or provide a way for users to opt-out from seeing it again. This will prevent the interruption of the user experience.

- **Priority:** Medium. While this issue is minor, it can significantly improve the first-time user experience and prevent frustration, particularly for returning users.
- 4. **Improve App Store Discoverability (App Store Visibility)**
 - **Solution:** Reevaluate the app's name and branding to make it more distinct from other similarly named apps. Consider adding a unique identifier or descriptor to the app's title in the App Store to improve search results and minimize confusion. In addition, enhance the app's app store description and keywords to ensure better discoverability.
 - **Priority:** Low. While this is not an urgent issue, making the app more distinguishable in the App Store will improve searchability and potentially increase downloads.

6. Conclusion

The Glowly AI app shows great promise with its impressive core features and the potential to revolutionize AI-based image generation. However, several issues need to be addressed to elevate the user experience and ensure the app's success in the competitive market.

The slow photo processing time is a major concern, as users expect faster results, especially when using AI-powered applications. Reducing the time taken for image generation will significantly improve user satisfaction and engagement. The reappearance of the "Rate Us" page, particularly during onboarding and app restarts, can become an annoying interruption, hindering a smooth user experience. Addressing this issue would contribute to a more seamless interaction, making the app feel more intuitive and user-friendly.

Additionally, the speed at which AI-generated images are displayed at app startup needs to be adjusted. Allowing users to view the images in detail before moving on would provide a more polished experience. Beyond functionality, the app's visibility in the App Store is another area for improvement. With multiple apps sharing the same name, users may find it difficult to discover Glowly AI, which could lead to missed opportunities for new downloads. Enhancing branding and optimizing search visibility will improve the app's chances of being found and used by a wider audience.

While these issues may seem minor in isolation, they can collectively impact the app's overall success. Addressing these concerns, along with continuous improvements in AI image generation quality and processing efficiency, will significantly enhance the app's value proposition and ensure a more polished, high-quality user experience.

In conclusion, with strategic adjustments in speed optimization, user interface tweaks, and better app store positioning, Glowly AI can elevate its standing and appeal among both new and returning users. By proactively addressing these issues, Glowly AI can provide a smoother, more enjoyable experience for users, ultimately helping it grow and thrive in a competitive app landscape.
